

ARROW® EPIDURAL CATHETERS

ARROW®
FlexTip Plus®
Epidural Catheter

The quality

The FlexTip Plus Epidural Catheter is clinically proven to significantly reduce complications in the epidural space.⁽¹⁻⁶⁾ This unique polyurethane catheter provides the precise balance of characteristics needed to get ease of placement, reliable patency, and optimum indwelling characteristics. Now this technology is available in both open tip and closed tip catheter configurations, so you can achieve the drug dispersion you prefer with the quality of care you demand for your patients.

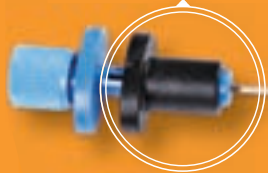

LESS INADVERTENT PENETRATION. The soft, flexible tip is designed to deflect when it contacts the dura or blood vessels, which significantly reduces the risk of vessel puncture⁽¹⁻⁵⁾ and paresthesia.^(2, 6)

RELIABLE PATENCY. The coil reinforcement makes the FlexTip Plus catheter kink resistant to better maintain patency, even in some situations that might cause ordinary nylon catheters to fail.⁽²⁻³⁾

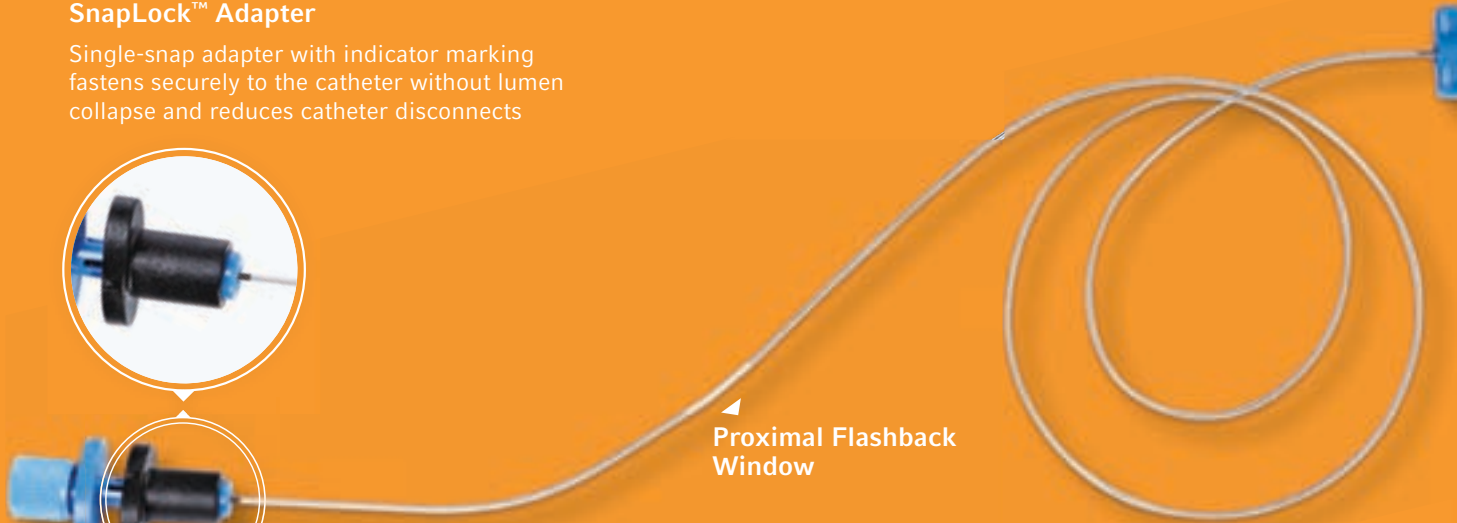

The results are enhanced comfort and safety for the patient and greater ease of use and reliability for the anesthesia provider.

SnapLock™ Adapter

Single-snap adapter with indicator marking fastens securely to the catheter without lumen collapse and reduces catheter disconnects

Proximal Flashback Window

of care you demand for your patients

Closed Flexible Tip with 4 Lateral Holes

Distal tip design reduces the risk of vessel puncture and paresthesia and provides multi-port drug dispersion

Catheter also available in open tip configuration

Thread Assist Guide

Distal Flashback Window

Two flashback windows permit easy visualization of blood or cerebrospinal fluid

Needle positioning band indicates exit of catheter from needle

ARROW®
TheraCath®
Epidural Catheter

Clinician-insp

DESIGNED FOR PAIN MANAGEMENT PROCEDURES WHERE INCREASED STEERABILITY IS AN IMPORTANT FACTOR.

The TheraCath Catheter is a wire reinforced, styletted epidural catheter with a soft, spring-wire tip. Anesthetic is injected through the internal lumen of the jacketed spring-wire and is uniformly disbursed through the expanded coil at the distal tip. The removable stylet is intended to increase steerability and maneuverability, which makes the TheraCath Catheter well-suited for specific pain management procedures where a kink resistant, stiffer catheter is required.

► Stylet

Soft Distal Tip

The stainless steel helical wire is identical to a soft-tip spring-wire guide at the distal tip, allowing anesthetic to be uniformly dispersed through the expanded coil.

KITS INCLUDE:

- SnapLock™ Adapter and Threading Assist Device
- 3/4 oz Foil Pack 10% Povidone-Iodine
- 10 mL 0.9% Saline
- 5 mL 1.5% Lidocaine HCl with Epinephrine 1:200,000 Solution
- 5 mL 1% Lidocaine HCl
- Prep Tray and Sponge Swabs
- 0.2 Micron Flat Filter
- 5 Micron Straw Particulate Filter
- Sharps Disposal Cup
- Catheter Support Pad
- Drug Identification Labels
- Towel
- Injection Needles
- Gauze Pads

Note: some kits contain additional components not listed here

SAFETY KITS (CONTAIN DRUGS)
