

RENASYS AB
Abdominal Dressing Kit with Soft Port

 **smith&nephew**
RENASYS[®] AB
Abdominal Dressing Kit with
Soft Port

Your solution for managing open abdominal wounds

Patients with critical open abdominal wounds require specialized treatment. When primary closure is not possible or repeat entries are necessary, you may require a comprehensive Negative Pressure Wound Therapy (NPWT) solution designed specifically for the open abdomen.

The RENASYS[®] AB Abdominal Dressing Kit with Soft Port from Smith & Nephew is an intuitive NPWT solution for temporary abdominal closure (TAC). This abdominal kit can be used with the RENASYS EZ Plus device, a powerful NPWT pump that is compatible with all RENASYS Dressing Kits. This improves efficiencies by eliminating the need for a dedicated abdominal device. In addition, you have the flexibility to leverage your RENASYS equipment across multiple care settings, patients and wound types.

Why choose the RENASYS AB?

A cost-effective solution

The RENASYS AB Dressing Kit with Soft Port is recommended for use with the powerful and intuitive RENASYS EZ Plus device, which can also be used with the RENASYS-F Foam and RENASYS-G Gauze Dressing Kits. This simplifies supply management and reduces training.

Fast, simple application

This RENASYS AB Kit with Soft Port includes everything required to achieve temporary abdominal closure. The organ protection layer is quick and easy to apply, saving costly OR time. Two pieces of pre-shaped foam allow you to meet specific needs and circumstances of the patient's open abdomen management. And the port dressing is simple and familiar.

Supports clinical goals

The RENASYS AB Kit with Soft Port protects and controls the abdominal contents by providing separation between the abdominal wall and the viscera. It also removes exudate and allows estimation of fluid loss, helps reduce edema, provides medial tension to slow fascial retraction, and supports timely primary fascial closure of the open abdomen.

Flexible and complete

The RENASYS® AB Kit with Soft Port is part of the complete RENASYS solution for NPWT. With a portfolio of compatible dressing kits offering a choice of foam and gauze interfaces, devices and accessories, you can cost-effectively treat a wide variety of chronic, acute and abdominal wounds.

For critical abdominal wounds, the RENASYS AB Kit with Soft Port works effectively with the RENASYS EZ Plus device, which offers simple controls, a high flow rate, and multiple pressure settings to help you customize the delivery of NPWT for high volume output wounds.
