# About Alere Toxicology

Who are we? You know us as a leader in point of care testing and laboratory services, but we're more than you think. We're smart, innovative individuals who want to make managing your substance abuse testing program easier.

We attribute our years of success to ingenuity and flexibility, and that hasn't changed. But, you can now rely on our combination of the largest point of care test device inventory in the market and expanded laboratory capabilities. Choose from any of our comprehensive offerings, including enhanced devices in the catalog, traditional urine or oral fluid testing at SAMHSA-certified laboratories, and all the administrative support for an effective, precise, and consistent program.

Through our technology solutions, you can easily manage your substance abuse testing program. We keep essential tools at your fingertips 24 hours a day, 7 days a week through web-based applications like ordering, training, form entry, result retrieval, invoicing, and payment. Alere Toxicology's enhanced resources unite as a single-source for your testing and administrative needs. You are not just a satisfied customer. You're an empowered individual.

## Discover Alere Toxicology.

We're more than you think. *A lot more.*

# Adulteration

The device you selected doesn't include built-in specimen validity? We here at Alere Toxicology have you covered with external adulteration strips. Testing for six different parameters, it covers virtually every method of tampering with specimen samples.

- Creatinine -** This test covers the most common form of specimen tampering, specimen dilution. Dilution using diuretics is also often referred to as "flushing".
- Nitrites -** This covers a class of chemicals not normally found in human urine. Common occurrences are the additive of such products as Klear.
- Glutaraldehyde -** This covers a class of chemicals not normally found in human urine. Common occurrences are the additive of such products such as Clear Choice or UrinAid.
- pH -** Tests for the presence of acidic or alkaline adulterants in urine.
- Specific Gravity -** Tests for the viscosity of the urine sample.
- Oxidants & PCC -** Tests for the presence of oxidizing reagents such as bleach, hydrogen peroxide and pyridinium chlorochromate.
